

Veracode Consulting Services

Highlights

Enterprises use Veracode Consulting Services To:

- Perform penetration testing on high assurance applications
- Meet regulatory compliance requirements for independent verification and validation (IV&V)
- Validate application design and architecture
- Increase and expand security testing without additional resources
- Leverage Veracode's world-class security consultants to speed remediation
- Conduct application portfolio risk assessments

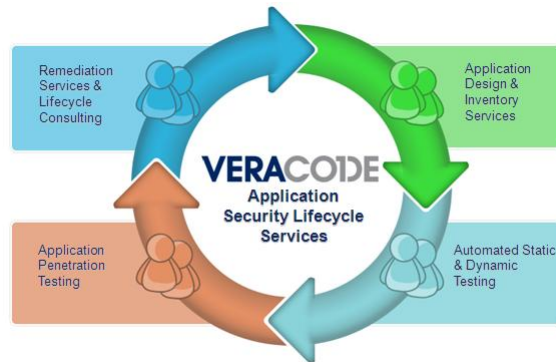

Key Features:

- **Identify True Issues** – Penetration testing to find exploitable vulnerabilities and business logic flaws
- **Security-as-a-Service** – Lower costs with no hardware or software to purchase, install & maintain
- **Integrated Technology** – Allows companies to do more with less by combining automated static and dynamic analysis with manual penetration testing
- **Independent Standards-Based Ratings** – Ratings based on NIST, CWE & CVSS to meet auditing & compliance standards
- **Rapid Time to Value** – Actionable results available in days not months

Veracode Consulting Services helps organizations reduce risk while improving their security posture, operational effectiveness and achieving compliance objectives. By leveraging our unique methodology that combines patented automated testing with world-class security consultants, Veracode is able to work closely and cost-effectively with our customers to offer a complete range of both strategic and technical assessment services.

Application Security Lifecycle Services

Applications have become the enterprise's "new perimeter" and with Gartner reporting that over 75% of new attacks target the application layer, application security has risen to the top of the agenda for security professionals striving to control their company's overall risk profile. Veracode Consulting Services provides a complete solution to address the entire application security lifecycle from design and testing to remediation and future strategy.

Veracode's application security consultants have years of experience and leading enterprises leverage their expertise to build and maintain secure applications throughout their development, deployment, and operational phases. By working closely with customers, Veracode has unique insight into both the business and application risk enabling us to prevent the root cause of issues and empower businesses to focus their efforts where they receive the maximum benefits in the shortest amount of time.

Application Penetration Testing

Veracode is the only solutions provider to combine patented automated static binary and dynamic analysis with manual penetration testing for high assurance applications. This unique approach enables organizations to cover their entire application portfolio and focus manual penetration testing efforts on critical applications. This results in lower overall risk, greater insight into third party applications, and reduced costs. Veracode's penetration testing services go beyond application security scanning to discover exploitable conditions including:

- Business Logic Issues
- Authorization Issues
- Design Issues
- Breaches of Confidentiality, Privacy & Integrity
- Combined Vulnerability Escalation (Domino Effect)
- Circumvention of Active Defenses

Highlights

Speed Remediation Veracode Fix First Analysis

Veracode's Fix First Analysis quickly identifies flaws and guides your developers through remediation efforts

Remediation Milestones

Veracode helps organizations track application ratings over time, enabling you to improve your project milestones

Application Design and Architecture Services

Insecure coding is not always the cause of software vulnerabilities. Application design can be the most critical step in creating secure software. Flaws introduced at design time can be difficult, time consuming, and costly to fix after an application is completed and deployed. Veracode Consulting Services enables organizations to embed security into their applications from the start. Our team of world-class security experts work with customer architects and developers to ensure that security controls are a fundamental part of the application's design before development begins.

Application Inventory Services

While it may seem obvious that organizations need to create an inventory of their applications that are being developed, purchased or maintained by an outsourcing provider, but it can be a challenging exercise. With the advent of low cost offshore development, open source, and low cost commercial software, it is common to see application "sprawl". Utilizing risk management frameworks and NIST recommended assurance levels, Veracode works closely with enterprises to create a comprehensive inventory of their applications in the context of their criticality to the business. This empowers organizations to make informed decisions on testing, remediation, mitigation, or retirement and meet internal and external regulatory requirements.

Application Remediation Services

Regardless of the method or choice of analysis techniques, most businesses are not prepared to process the resulting security analysis data. Application development departments are focused on bringing functional applications to market as quickly and inexpensively as possible and may not have the skills necessary to resolve security issues. Veracode Consulting Services provides the expertise and experience necessary to guide developers through the remediation process by identifying which vulnerabilities need to be fixed and applying industry best practices to resolve the issues as quickly and cost-effectively as possible.

About Veracode

Veracode is the world's leader for application security testing solutions. Veracode SecurityReview is the industry's first solution to use patented binary code analysis, dynamic web analysis and application penetration testing to uniquely assess any application security threats including vulnerabilities and malicious code. SecurityReview performs the only complete and independent security audit across any internally developed applications, third-party commercial off-the-shelf software and offshore code without exposing a company's source code. Delivered as an on-demand service, Veracode delivers the simplest and most-cost effective way to implement security best practices, reduce operational cost and achieve compliance without requiring any hardware, software or training.

Veracode has established a position as the market visionary and leader with awards that include recognition as a Gartner 'Cool Vendor' 2008, Info Security "Tomorrow's Technology Today Award 2008", Information Security "Readers' Choice Award 2008", AlwaysOn Northeast Top 100 Private Company 2008, NetworkWorld "Top 10 Security Company to Watch 2007", and Dark Reading's "Top 10 Hot Security Startups 2007". Based in Burlington, Mass., Veracode is backed by .406 Ventures, Atlas Venture and Polaris Venture Partners. www.veracode.com. For more information, visit www.veracode.com
