

THE EVOLUTION OF STATIC

How Static Analysis Has Changed in a DevOps World

As organizations continue to shift from Agile development to DevOps, application security testing techniques, including static analysis, have grown and improved along the way. Today's static analysis solutions check and secure code across the entire application lifecycle, from development to production.

Follow the journey as the application code grows and our security testing solutions do, too.

INDIVIDUAL DEVELOPER

Great developers want to create great code, and that means secure code. Modern static analysis innovations allow them to do just that.

Veracode Greenlight gives developers the ability to scan snippets of their code in their favorite IDE. Whether they're working in Java, JavaScript, C# or VB.NET, developers get instant feedback so they can write great, secure code.

3 SECONDS

Java scans in **Veracode Greenlight** take an average of just 3 seconds.

DEVELOPMENT TEAM

Development teams want to test applications while they're still in development, but they don't want to be marked as failed in security and executive dashboards.

Veracode Developer Sandbox lets teams assess new code against the security policy without triggering compliance reporting for the current version of the app. This lets teams fix code between releases and reduce organizational risk.

48% BETTER

DevOps organizations that test frequently with **Veracode Developer Sandbox** have a 48% better fix rate than those doing policy-only scanning.

ENTERPRISE LEVEL

Regardless of how developers and teams integrate static testing into the pipeline, full application testing is still necessary.

Veracode Static Analysis enables enterprise-level security teams to conduct full testing and analysis. It scans a complete packaged application for combined static analysis and **software composition analysis**, resulting in a single pass/fail result.

50% < 15 MINS

50% of Veracode Static Analysis scans take less than 15 minutes.

From solutions for individual developers to those for enterprise-level security teams, static analysis solutions have evolved alongside DevOps to provide critical security across the entire application lifecycle.

VERACODE

About Veracode

Veracode is a leader in helping organizations secure the software that powers their world. Veracode's SaaS platform and integrated solutions help security teams and software developers find and fix security-related defects at all points in the software development lifecycle, before they can be exploited by hackers. Our complete set of offerings helps customers reduce the risk of data breaches, increase the speed of secure software delivery, meet compliance requirements, and cost effectively secure their software assets - whether that's software they make, buy or sell. Veracode serves over a thousand customers across a wide range of industries, including nearly one-third of the Fortune 100, three of the top four U.S. commercial banks and more than 20 of the Forbes 100 Most Valuable Brands. Learn more at veracode.com, on the Veracode Blog, and on Twitter.
