

Application Risk Management Platform

Build and scale secure software from code to cloud with speed and trust.

Building and running secure software has always been a balance of risk, speed, and scale between development and security teams. The complexity of environments today, with distributed tools, fragmented scanning, open source use, AI code generation, and more, only compounds this problem. That leaves organizations struggling to prioritize fixes, remain compliant, burn down mounting security debt, and effectively manage risk.

The Veracode Platform provides a comprehensive approach to build and secure your software and manage application risk. Mitigate these risks with robust tools, solutions, AI-generated fixes and ASPM capabilities to gain visibility into vulnerabilities from code to cloud.

→ Fast Start and Scale

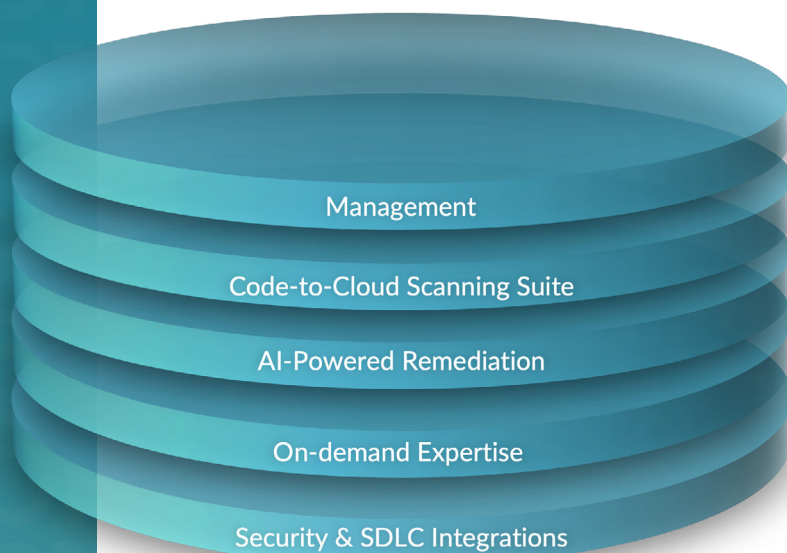

Automate onboarding at scale with a dedicated team of experts while utilizing training resources to find and fix flaws reducing security debt.

→ Real-Time Flaw Remediation

Unlock the potential of real-time flaw remediation enabling rapid reduction of security debt and proactive prevention of flaws.

→ Actionable Visibility

Gain actionable visibility into your application risk with code to cloud scanning coverage, providing accurate findings and prioritization.

Application Risk Management

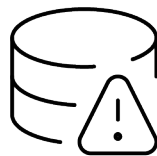

Application risk management done right with centralized policy, focused remediation, application security posture management (ASPM) and root cause analysis to address the most critical security issues.

Code to Cloud Scanning

Application security covering [Static Application Security Testing \(SAST\)](#), [Software Composition Analysis \(SCA\)](#), [Dynamic Application Security Testing \(DAST\)](#), [Infrastructure as Code \(IaC\)](#) and [container scanning](#).

AI Powered Remediation

Proactively address vulnerabilities and scale your security debt remediation with [Veracode Fix](#). Fix leverages AI to accelerate flaw remediation from hours to minutes, supercharging developer productivity.

On-Demand Expertise

Enhance your security program with our expert guidance, which addresses intricate challenges and fosters secure coding practices. Our comprehensive suite includes: [eLearning](#), [Security Labs](#), [Application Security Consultants](#), and [Penetration Testing as a Service \(PTaaS\)](#).

Security & SDLC Integrations

Effortlessly incorporate security measures into your IDE, Repo, CI/CD, Cloud, and AST platforms for enhanced application protection, streamlined vulnerability management, and accelerated time-to-market.
