

# Veracode Application Security Platform

Veracode provides a holistic, scalable way to manage security risk across your application portfolio. We offer a wide range of security testing and threat mitigation technologies, hosted on a central platform, so you don't need to juggle multiple vendors or deploy on-premise tools.

**Veracode Greenlight**  
Instant scanning for developers — right in the IDE

**Veracode Software Composition Analysis**  
Identify and eliminate risk in third-party components

**Veracode Static Analysis**  
Assess your integrated applications for policy compliance

**Veracode Dynamic Analysis**  
Find vulnerabilities in applications deployed to production

**Veracode Discovery**  
Discover and inventory all of your publicly facing web applications

### BUG TRACKING

### GRC

# Veracode Services

Veracode helps you build your application security program and supports you every step of the way, across the software life cycle.

## About Veracode

Veracode gives companies a comprehensive view of security defects so they can create secure software, and ensure the software they are buying or downloading is free of vulnerabilities. As a result, companies using Veracode are free to boldly innovate, explore, discover, and change the world.

With its combination of automation, integrations, process, and speed, Veracode helps companies make security a seamless part of the development process. This allows them companies to both find and fix security defects so that they can use software to achieve their missions.
