Veracode Manual Penetration Testing

Interested in learning about what it’s like to work with Veracode’s Manual Penetration Testing (MPT) experts? Here’s an overview of the details and steps used to conduct a penetration test from start to finish.

Scoping MPT for Your Application

Time-Boxed MPT is completed within the number of days you purchase and doesn’t require scoping of the application.

Looking for traditional scoped MPT? You will need to fill out an MPT Scoping Questionnaire. Your Veracode contact can provide this for you. Send it back to us when completed.

- If your MPT experts need more information, we will reach out to schedule a more in-depth consultation with the application owner.
- If you test, your Veracode contact will assist you with the scope for your consideration.

Nailing Down the Details

Depending on availability, Veracode will schedule your MPT on the next available date.

- If you have a specific start date in mind, we will do our best to accommodate your request.
- If the logistics test is due 5 days before the start date so we can start testing on time — otherwise, we may need to reschedule your engagement.

Veracode will contact you with details about your test and a logistics worksheet for you to complete.

- The logistics worksheet asks for URLs, credentials, and connectivity details.
- Logistics allows Veracode to test connectivity to the application.

The logistics worksheet is due 5 days before the start date so we can start testing on time — otherwise, we may need to reschedule your engagement.

Veracode will contact you before testing begins and let you know the test is starting according to the agreed upon scope and requirements.

Reviewing the Results

When testing is complete, we will conduct a technical peer review of the test findings.

Once the peer review is complete, Veracode will let you know when the results are published to the Veracode Platform.

- The report is available 3-5 days after the test completes.

Consultation and Retest

You can request a one-hour consultation call to discuss the MPT report and answer any questions you have about the findings or remediation.

If purchased separately, you can schedule a retest to confirm remediation of previously identified flaws.

- If you request a retest, email the list of flaws to be retested and an updated logistics worksheet (if required) to Veracode Support.
- Veracode Support will schedule the retest. The report is available 3-5 days after the retest completes.

Need to mitigate a flaw from the MPT report? Contact Veracode Support with your list of flaws to mitigate.

Ready to schedule a Manual Penetration Test for your organization’s applications?

Contact your Veracode Sales Representative, Security Program Manager, or Support (support@veracode.com) with any questions about purchasing, scoping, or scheduling a Manual Penetration Test.
