

# SaaS-Based Application Security Solution

## SaaS

## On-Premises

### Deployment

✓ **NONE**  
You start scanning on day one.

✗ **YOU DEPLOY YOURSELF**  
Once you set up the servers, you have to install the software and configure the systems. It can take up to 60 days to provision a server.

### Maintenance

✓ **NONE**  
You don't worry about keeping scanners up to date and optimized.

✗ **YOUR RESPONSIBILITY**  
You have to keep the software patched and hardware up to date.

DID YOU KNOW?

**\$1.3 million**

saved in server costs over three years from using Veracode's cloud-based application security.

Forrester TEI report

### Operational issues

✓ **NONE**  
A SaaS vendor ensures the system is running properly.

✗ **YOUR RESPONSIBILITY**  
You are responsible for troubleshooting servers or application scans.

### Manage scan spikes

✓ **AUTOMATIC**  
The solution is elastic, and will auto-scale to meet demand.

✗ **YOUR RESPONSIBILITY**  
You'll have to plan for peak capacity and continuously pay for it.

DID YOU KNOW?

**\$360,000**

cost savings over three years from scaling on-demand with Veracode.

Forrester TEI report

### Cost for high availability

✓ **NO ADDITIONAL COST**  
You get redundant systems for no additional cost.

✗ **ADDITIONAL COST**  
If you want to have this advantage, it will increase your cost exponentially because you will need to rebuild redundant systems for each deployment.

### Accuracy

✓ **LOW FALSE POSITIVE RATES**  
Developers and security professionals can easily mark a finding as a false positive, meaning low false-positive rates, without self-tuning.

✗ **ADDITIONAL MAINTENANCE REQUIRED**  
On-premises users need to tune the scanner for each application to reduce the false-positive rate.

### Budgeting

✓ **ALL INCLUSIVE PRICING**  
Your subscription includes all of the operational cost, including compute power and operational maintenance.

✗ **UNPREDICTABLE ADDED COSTS**  
Operational cost is unpredictable and added on top.
