CISO

Lead the Way

Secure the Enterprise

74%
of orgs have
security debt[1]

49.9%
of orgs have
critical security
debt[1]

Are you a CISO, Head of Security, or VP of Application Security tasked with defining and maturing your organization's AppSec program and managing cybersecurity risks from a comprehensive perspective? You're not alone. Many security leaders are concerned with data breaches and cyber threats, non-compliance penalties, and a lack of visibility into their AppSec risk. They also struggle with fragmented tools and the difficulty of justifying security budgets.

Veracode is built to solve these challenges, providing the comprehensive coverage and strategic visibility you need to proactively **manage risk** and secure your **software supply chain**.

Your Biggest Challenges, Solved.

Losing the Fight Against Risk?

We help you prioritize what matters. Over half of all applications tested by Veracode exhibit high or critical severity flaws[2]. Our platform gives you the visibility to focus on the most exploitable risks, helping you to efficiently reduce your exposure.

Struggling to Secure the Supply Chain?

Your applications include a plethora of open-source libraries that may contain flaws. While a small percentage of overall security debt comes from third-party code, that ratio jumps to 70% for third party critical security debt[3]. We help you identify and manage these risks, ensuring a successful debt-fighting strategy.

Difficulty Demonstrating ROI?

Veracode Analytics empowers you to transform data into actionable strategies that optimize your AppSec program and drive measurable results. Benchmark your performance against industry peers and use executive-level reporting to showcase program value to decision-makers with key performance indicators.

Regulatory Pressures Mounting?

Gain a comprehensive, centralized view of application compliance with security policies to meet regulatory and organizational requirements. Our platform simplifies audits and helps you ensure continuous compliance with industry regulations through **comprehensive policy enforcement** and auditable reporting.

VERACODE

Built for How You Work

As a CISO, you are the primary authority for approving cybersecurity investments. You evaluate AppSec solutions from a comprehensive risk management perspective, defining requirements and weighing technical fit against business risk and cost.

Our solution provides:

- **Comprehensive Coverage:** Reduce vulnerabilities with our comprehensive coverage.

- **Robust Reporting & Analytics:** Gain insights into your security posture and account for executive reporting on AppSec program effectiveness and ROI.

- **Scalability:** Our solutions are designed to scale to your needs.

Your Success Metrics are Secured with Veracode

- Establish and mature the organization's AppSec program.

- Proactively manage AppSec risk and reduce exposure.

- Gain full visibility into your application portfolio and APIs.

- Ensure compliance with regulatory requirements and industry frameworks.

- Mitigate AppSec risk with AI-assisted remediation.

- Justify security investments with clear, data-driven reporting.

Ready to Secure Your Software Supply Chain?

See how CISOs and security leaders like you are leading the way and maturing their AppSec programs with Veracode.
