Protect Your Business

Secure Your Software

50%
of orgs have *critical* security debt[1]

70%
of that debt comes from third-party code.[1]
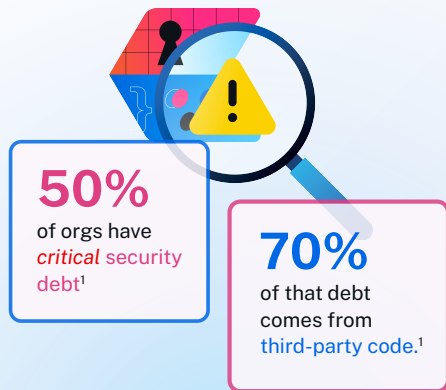

Are you a Head of AppSec, Director of AppSec, or VP of Product Security tasked with developing a robust application security program while bridging the gap between security and development teams? You're not alone. Many AppSec leaders face the constant pressure of a complex and rising attack surface, fear of critical vulnerabilities in production leading to data breaches, and the challenges of gaining full visibility into all applications and APIs. **Veracode** is built to solve these challenges, providing the strategic control and actionable intelligence you need to proactively manage risk and secure your **software supply chain**.

Your Biggest Challenges, Solved.

Losing the Race Against Rising Security Debt?

Veracode helps you get ahead. While half of organizations have critical security debt, 70% of that debt comes from third-party code[2]. Our platform helps you gain control over these risks.

Struggling to See the Full Picture?

We provide the visibility you need to focus on what matters most. **Our platform** provides a breakdown of all flaws by severity and exploitability, helping you prioritize remediation efforts.

Wasting Time on False Positives?

We provide accurate and actionable results that minimize false positives and offer **remediation guidance**, so your team can focus on what's critical.

Trouble Demonstrating Program Effectiveness?

We provide the metrics you need for executive reporting and proving ROI on security tools. You can easily demonstrate that your organization is outperforming competitors through **benchmarked metrics**.

VERACODE

Built for How You Work

As a key decision-maker and influencer, you define the strategic vision for your AppSec program and lead the technical assessment of tools. Veracode is designed to meet your most important buying criteria, including seamless integration with development tools, robust reporting, and automation of security testing across the **SDLC**.

- **Full SDLC Visibility:** Gain visibility into all applications and APIs across the SDLC to understand and manage your risk posture.

- **Automated Security Testing:** Integrate security testing seamlessly into your existing CI/CD pipelines, promoting DevSecOps principles.

- **Robust Reporting:** Account for executive reporting on AppSec program effectiveness and ROI.

Your Success Metrics are Secured with Veracode

- Mature and implement a strategic AppSec program.

- Accelerate secure software delivery.

- Ensure continuous adherence to regulatory and industry security standards.

- Streamline processes, and reduce manual effort with AI-assisted guidance.

- Secure the software supply chain by identifying and managing vulnerabilities in third-party code.

Ready to secure your Software Supply Chain?

See how AppSec leaders like you are maturing their programs and reducing security debt with Veracode.
