Veracode Fix

"With Veracode Fix, developers received precise guidance, reducing the time and effort needed to secure applications."

Sebastián Wilke,
Cybersecurity Manager,
Banco Galicia

Background/Challenge

Banco Galicia, the largest private bank in Argentina, embarked on a digital transformation journey in 2018. As they progressed, it became evident that standard tools were insufficient for protecting applications. The need for a robust Application Security (AppSec) solution became critical, especially with the onset of the pandemic, which necessitated that customers be able to perform all transactions online without visiting branches. This shift made Application Security a paramount component of the bank's risk management strategy.

Solution

- Versatility and ease of integration into CI/CD pipelines
- Minimal setup and downtime
- Cloud Based Solution

Results

- Enhanced digital security and risk management capabilities.
- Reduced risk
- Streamlined the Application Security process with Veracode Fix
- Cost savings
